jiviteshkumar.github.io/jivitesh-port

Final-year B.Tech IT student building AI systems where deterministic code handles what must be exact and models handle what changes. Two internships shipping AI in telecom security and hospitality SaaS; building Leo, a self-repairing browser-automation extension.

EXPERIENCE

DigiGo LLP — Intern · On-site — Jun 2026 – Aug 2026

AI SaaS for identity verification and guest operations in hospitality

- Helped build the authentication flow and make the end-to-end sign-in experience seamless; contributed to research, AI product development and client relationship management, reporting directly to a co-founder.

Tata Teleservices Limited — AI/ML Intern — Jun 2025 – Dec 2025

Intelligent abuse email processing and incident summarisation

- Built an end-to-end pipeline triaging **1,000+ abuse and security emails a day** (IP abuse, phishing, botnet, DDoS, blacklist notices), cutting manual analysis time by **over 80%** — from 3–5 minutes of reading per email to seconds.
- Orchestrated with Power Automate from Outlook; normalised HTML, PDF, CSV and log attachments to clean text and deduplicated and standardised records with Pandas.
- Extracted IPs, domains, ASNs, ports, URLs, hashes and timestamps with regex **before** summarisation, so the fields analysts act on never depended on model output.
- Generated structured incident summaries (attack type, affected IP, severity, root cause) with a **FLAN-T5 Base model fine-tuned** on historical analyst summaries using **LoRA/PEFT and 4-bit quantisation** and **deployed in production**, replacing the initial prompt-based approach; evaluated by hand for factual accuracy, missed entities and hallucination.

`Python · Pandas · NumPy · Regex · OpenPyXL · Hugging Face Transformers · BitsAndBytes · Power Automate`

PROJECTS

Leo — Chrome extension · in active development — 2026

- Records a browser task once and replays it as **plain code with zero AI calls on a clean run**; AI repairs a step only when all of up to 10 ranked selectors miss (text match first, vision agent on low confidence) and saves the fix back as code.
- Rebuilt the replay engine for reliability: trusted input via the Chrome DevTools Protocol, actionability waits, cross-origin iframes, navigation, download and tab handling, drag-and-drop, per-step logs and failure screenshots — **17 passing e2e scenarios**.
- Moved all AI calls behind authenticated, rate-limited server routes and added an Anthropic Claude / Groq GPT-OSS-120B provider layer, passing **3/3 live-model tests** including self-healing a redesigned page.

`TypeScript · Chrome MV3 (WXT) · React · Next.js · Neon + Drizzle · better-auth · Bun · Playwright`

Venture Flow — AI due-diligence platform · live — venture-flow-livid.vercel.app

- Parses pitch decks in 5 formats, reconstructs multi-column layout order, extracts founders for verification, and returns **confidence-scored risk assessments** with conversational follow-up; analysis runs as 2–4 minute background jobs.

`React 18 · TypeScript · Vite · Tailwind · FastAPI · Groq · PostgreSQL (Neon)`

sudo — Android app · tech news, jobs and a verified skills radar — github.com/JiviteshKumar/sudo

- Trained and shipped an **on-device extractive summariser** (20 features → 24 units, ~530 weights) that prints the article's own sentences verbatim and so cannot hallucinate — **28.4 ROUGE-1** on the held-out tech set against 27.4 for the lead baseline and 24.9 for TextRank, in milliseconds with no network. Plus an evidence-gated Skills Radar and résumé-scored jobs from 5 boards.

`Kotlin · Jetpack Compose (Material 3) · Room · WorkManager · DataStore · OkHttp · Jsoup · Glance widget · Gemini API`

EDUCATION

KJ Somaiya College of Engineering — B.Tech, Information Technology · Mumbai — 2023 – 2027

SKILLS

AI / ML	Hugging Face Transformers, FLAN-T5, LoRA / PEFT, 4-bit quantisation, Anthropic Claude, Groq, prompt design, manual evaluation
Data analysis	Pandas, NumPy, data cleaning, regex extraction
Frontend	React 18, Next.js, TypeScript, Vite, Tailwind CSS, Chrome MV3 (WXT), Chrome DevTools Protocol
Backend & tools	Python, FastAPI, PostgreSQL (Neon), Power Automate, Git, Vercel
